Viswanadha Raju

Frisco, Tx, 75034 | (945) 316-9335 | viswanadha737@gmail.com

Summary:

Lead Software Engineer with 14+ years of expertise in designing, developing, and deploying scalable, high-performance enterprise applications. Proven experience in Java/J2EE, Spring Framework, Spring Boot, Microservices, RESTful & SOAP APIs, Hibernate/JPA, Cloud technologies (AWS). Skilled in application modernization, API development, system integration, and performance optimization across diverse domains. Strong background in Agile/Scrum, CI/CD pipelines, Docker, Kubernetes, Git, and DevOps practices, ensuring seamless delivery of complex projects. Adept at collaborating with cross-functional teams, mentoring developers, and driving best coding practices and architecture decisions. Passionate about solving business problems with clean, maintainable, and efficient code while aligning with organizational goals.

Technical Skills:

- **Programming Languages:** Java (Java 8–21), J2EE, SQL
- **Frameworks & Libraries:** Spring (Core, Boot, MVC, Security, Batch), Hibernate, JPA, Struts, HTML, CSS, jQuery
- **Microservices & APIs:** RESTful APIs, SOAP Web Services, API Gateway, Swagger, SOA
- **Cloud & DevOps:** AWS, Docker, Kubernetes, Jenkins, GitHub Actions, Maven
- **Databases:** Oracle, MySQL, PostgreSQL, MongoDB
- **Messaging & Streaming:** Apache Kafka, RabbitMQ
- **Version Control & Collaboration:** Git, GitHub, Jira
- **Testing & Quality:** JUnit, Postman
- **Architectural & Design Expertise:** Microservices Architecture, Event-Driven Architecture, Monolith-to-Microservices Migration, MVC, Design Patterns, Scalable System Design, High Availability & Resilience
- **Others:** CI/CD, Linux/Unix, Agile/Scrum methodology, Design Patterns, Performance Optimization

---

Professional Experience:

Client - KPMG – Aug 2023 – Present

Lead Software Engineer

Responsibilities:

- Lead modernization projects migrating Monolithic applications to Microservices. Developed enterprise-grade applications using Java (Java 8–21), leveraging Streams modern APIs to simplify code improve performance.
- Built distributed enterprise applications using J2EE, Servlets, JSP, EJB, ensuring scalability. Developed complex queries, triggers in SQL to handle transactional workflows efficiently. Built RESTful microservices using Spring Boot, integrated with JPA/Hibernate for seamless persistence.
- Designed and optimized Oracle DB schemas integrated with Java Spring Framework, Hibernate, and Kafka-based data pipelines. Developed complex queries and stored procedures in Oracle DB to support Struts and JSP-based web applications.
- Implemented ORM solutions using Hibernate in Spring Framework integrated with Oracle DB and Java backend services. Designed entity mappings and optimized data access using Hibernate with Spring Boot and JSP-based applications.
- Developed end-to-end testing frameworks using Playwright for applications built with Java Spring, JSP, and jQuery. Automated UI and API testing workflows for HTML/CSS-based applications integrated with Oracle DB and Kafka. Implemented CI/CD using Jenkins for applications built with Java Spring, Hibernate, Oracle DB.
- Automated build, test, and deployment processes integrating Playwright testing and Kafka-based services.
- Developed enterprise web applications using Struts framework integrated with Java, JSP, and Oracle DB.
- Designed MVC architectures using Struts for scalable full-stack applications.
- Developed dynamic web pages using JSP integrated with Java Spring Framework, Hibernate, and Oracle DB.
- Built server-side rendering logic using JSP for applications using Struts MVC architecture.
- Designed semantic and responsive layouts using HTML for applications built with JSP, Struts, and Java backend services. Integrated HTML structures with CSS and jQuery to enhance user experience in enterprise applications.

- Developed interactive UI components using jQuery integrated with HTML, CSS, and JSP-based applications.
- Implemented AJAX calls using jQuery to interact with Java Spring and Oracle DB backend services.
- Designed responsive and visually appealing interfaces using CSS integrated with HTML, JSP, and jQuery.
- Implemented modern styling techniques for Struts-based web applications.
- Implemented event-driven architectures using Kafka integrated with Java Spring Framework and Hibernate.
- Built real-time data pipelines using Kafka producers and consumers connected to Oracle DB systems.
- Implemented ORM with Hibernate, simplifying database operations through entity mapping. Built scalable persistence layers with JPA, using annotations for entity mapping. Designed and developed secure RESTful APIs for cross-platform application integration.
- Designed large-scale enterprise applications using Java 8–17, JEE, and multi-tier architectures, integrating core components such as Servlets, JSPs, and JDBC for secure and high-performance solutions.
- Architected backend systems using Spring Boot, Spring MVC, and Struts frameworks, implementing dependency injection, AOP, and transaction management to build efficient and robust enterprise-grade applications.
- Integrated Hibernate ORM for database interactions, optimizing entity relationships, caching strategies (L1/L2), and HQL queries to improve data persistence performance. Developed and deployed stateless and stateful EJB components within JEE containers IBM WebSphere to manage distributed transactions and session persistence.
- Directed the front-end modernization of enterprise portals using HTML5, CSS3, and Bootstrap, ensuring responsive, accessible, and visually consistent user interfaces across browsers and devices.
- Enhanced front-end interactivity and performance using JavaScript (ES6+), jQuery, and Ajax, enabling asynchronous communication with RESTful APIs for dynamic user experiences. Utilized XML and XSD schemas for data exchange between distributed systems, ensuring validation, compliance with enterprise data standards.
- Developed dynamic single-page applications (SPAs) using AngularJS and RESTful APIs, integrating with Java-based backends to enhance user interaction and data visualization. Designed microservice-oriented and layered architectures leveraging Spring Boot, REST APIs, and Kafka to ensure scalability and fault tolerance.
- Defined end-to-end application architecture encompassing backend services, front-end frameworks, and middleware integrations, ensuring modular and reusable design patterns. Created detailed system flow diagrams, data flow models, and component interaction charts using Lucidchart, Visio, and Draw.io to communicate technical solutions clearly to business and technical teams.
- Directed multiple Agile development teams in delivering enterprise-grade Java applications, providing code reviews, sprint planning, and technical mentorship.
- Managed code versioning using Git, enabling efficient branching, and merging strategies. Hosted repositories in GitHub, enabling collaboration across distributed teams. Tracked project progress using Jira, aligning with Agile/Scrum methodologies. Wrote unit tests in JUnit to ensure code reliability and coverage.
- Designed and tested RESTful APIs using Postman collections. Architected distributed systems using Microservices. Conducted JVM and SQL tuning for Performance Optimization in large-scale apps.
- Designed real-time applications using Event-Driven Architecture with Kafka and RabbitMQ. Applied OOAD principles to design scalable and reusable Java applications. Built web applications using MVC architecture in Spring and Struts. Applied MVVM pattern in UI development for modular and testable code.
- Automated software delivery using CI/CD pipelines with Jenkins and GitHub Actions. Deployed applications on Linux/Unix servers, ensuring high availability. Practiced Agile/Scrum methodology for iterative software development. Applied Design Patterns like Singleton, Factory, and Observer in Java projects.

Client - CVS – Oct 2018 – Jul 2023

Senior Software Engineer

Responsibilities:

- Developed Java-based solutions data exchange between disparate systems. Designed RESTful APIs Spring Boot and Spring MVC for secure transmission of operational data, system interoperability, and scalability.
- Provided technical leadership in developing modular JEE components, ensuring scalability, maintainability, and adherence to design patterns (MVC, Singleton, Factory) for long-term sustainability. Migrated legacy Struts-based monoliths to Spring Boot microservices, improving scalability, CI/CD readiness, and response times through containerization with Docker and Kubernetes.
- Integrated Oracle DB with Hibernate ORM in Spring Framework for efficient data access layers.
- Tuned database performance using indexing and query optimization for applications built with Java, JSP, and jQuery. Integrated Hibernate ORM with Kafka-driven microservices for efficient data persistence.
- Managed transaction handling and lazy loading strategies using Hibernate within Spring applications.

- Integrated Playwright testing suites into Jenkins CI/CD pipelines for continuous quality assurance.
- Validated frontend behavior in applications using Struts, JSP, and dynamic jQuery components.
- Managed deployment of full-stack applications including Struts, JSP, HTML, CSS, and jQuery components.
- Integrated Jenkins pipelines with version control systems for continuous integration of Java applications.
- Integrated Struts-based applications with Hibernate and Spring Framework backend services.
- Built dynamic user interfaces using Struts with jQuery, HTML, and CSS. Integrated JSP pages with HTML, CSS, and jQuery for interactive user interfaces.
- Optimized performance of JSP applications by improving backend data access via Hibernate and Oracle DB.
- Built dynamic content rendering using HTML within JSP pages connected to Oracle DB.
- Ensured cross-browser compatibility using HTML standards for applications tested with Playwright.
- Enhanced user experience in Struts applications using dynamic behavior powered by jQuery.
- Integrated jQuery components with Playwright testing frameworks for UI validation.
- Ensured consistent UI/UX across applications built with Java backend and Oracle DB integration.
- Optimized CSS performance for large-scale enterprise applications. Integrated Kafka messaging with Struts and JSP-based applications for asynchronous processing.
- Deployed and managed Kafka clusters for scalable enterprise applications.
- Lead schema design and data mapping strategies with JPA and Hibernate, aligning domain models with business logic while ensuring transactional integrity query execution. Leveraged EJB 3.0 annotations and interceptors to simplify business logic and enhance application modularity within enterprise-grade backend systems.
- Collaborated with UI/UX teams to implement custom style guides and reusable layout templates, improving front-end maintainability and aligning visual design with corporate branding. Developed custom AJAX-based data loading mechanisms for dashboards significantly improving responsiveness and reducing full-page reloads.
- Collaborated with infrastructure teams to automate deployments via WebSphere scripting (wsadmin), ensuring consistent and reliable release management. Lead the migration from AngularJS to Angular (v14+), adopting modern TypeScript-based components, modular architecture, RxJS-driven reactive design patterns.
- Created and maintained architecture blueprints and UML diagrams for system design, aligning with enterprise standards and ensuring clarity for development teams. Collaborated with stakeholders and architects to translate business requirements into scalable technical designs, ensuring integration with existing enterprise ecosystems.
- Conducted architecture walkthroughs and technical demos, illustrating scalability, fault tolerance, and design decisions for leadership and cross-functional teams. Designed connector modules and middleware APIs using Spring Integration and Apache Camel, enabling seamless interoperability with third-party enterprise services.
- Collaborated with business analysts, QA, and DevOps to align technical implementation with business goals, ensuring timely delivery of high-quality software solutions. Established development best practices, CI/CD workflows, and coding standards using Git, Maven, Jenkins, enhancing team productivity and code reliability.
- Optimized Java applications through performance tuning, algorithm optimization, memory management. Migrated legacy systems from Java 7/8 to Java 11 and Java 17, adopting modularization and records for cleaner architecture. Integrated back-end systems via J2EE JMS and JDBC, delivering secure and reliable messaging and data access. Optimized SQL queries and indexing, reducing execution times by 40%.
- Implemented authentication authorization with Spring Security, leveraging JWT, OAuth2. Applied caching in Hibernate enhance query performance. Optimized JPA queries with Criteria API high-volume data applications.
- Documented RESTful APIs with Swagger for seamless team collaboration. Applied WS-Security to SOAP Web Services for encryption and authentication. Improved reliability of services by applying caching and load balancing at API Gateway level. Automated test case generation from Swagger specifications for faster QA cycles. Implemented event-driven systems with AWS SNS and SQS, ensuring reliable messaging.
- Built Docker images for microservices and deployed them to Kubernetes clusters. Automated container orchestration using Helm charts in Kubernetes. Integrated Jenkins with Maven, Git, and Docker for end-to-end CI/CD workflows. Integrated GitHub Actions with Docker and Kubernetes for cloud-native deployments.
- Automated testing and packaging in Maven through lifecycle phases. Wrote efficient PL/SQL procedures, triggers, and views in Oracle. Optimized MySQL queries with indexing strategies to boost response times.
- Implemented aggregation pipelines MongoDB handle complex analytics. Configured Kafka producers Java applications reliable messaging. Configured durable queues exchanges in RabbitMQ ensure message reliability.

Client - Harland – Mar 2014 – Sept 2018

Software Engineer

Responsibilities:

- Spearheaded the design of new features in applications Java Spring Boot and client requirements. Developed scalable microservices with Spring Boot, Spring MVC RESTful APIs, Spring Security for robust data security.
- Implemented concurrency and multi-threading solutions in Java. Applied J2EE design patterns for modularization, resulting in cleaner and reusable codebases. Designed reporting solutions using SQL for business intelligence and analytics.
- Designed web applications with Spring MVC. Migrated JDBC-based persistence layers to Hibernate, reducing boilerplate code. Applied JPA inheritance strategies. Optimized RESTful API performance using pagination.
- Migrated legacy SOAP Web Services REST for enhanced scalability. Secured applications with IAM roles integrated into API Gateway policies. Automated infrastructure provisioning on AWS with CloudFormation templates. Optimized resource usage with Docker Compose for multi-container orchestration.
- Configured monitoring and logging solutions with Grafana in Kubernetes clusters. Automated code quality checks using GitHub Actions with SonarQube. Configured multi-module projects in Maven for large-scale applications. Implemented replication and backup strategies in MySQL for data resilience.
- Integrated RabbitMQ with Java Spring Boot applications for scalable processing. Implemented code review processes using Git pull requests. Enforced code quality checks with branch protection in GitHub.
- Integrated Jira with Jenkins and GitHub for real-time status updates. Configured IAM roles and security groups in AWS for secure application deployment.
- Secured Microservices with JWT, and centralized API Gateway. Ensured resilience and scalability in Event-Driven Architecture through partitioning. Applied DDD principles in Microservices migration. Implemented SOLID principles through OOAD in enterprise projects.
- Implemented blue-green and canary releases via CI/CD. Delivered working increments within 2-week Scrum sprints for faster ROI. Reduced code complexity using structural Design Patterns like Adapter/Decorator.

Client - First Citizen Bank - May 2011 – Feb 2014

Software Engineer

Responsibilities:

- Developed enterprise-grade banking solutions using Java programming to enhance Fist Citizen Bank's core services and customer-facing applications. Tuned JVM and applied garbage collection strategies in Java to reduce application latency. Enhanced security in J2EE applications using JAAS and role-based access controls.
- Leveraged the latest Java/J2EE technologies, including Struts, JSP for scalable application development. Created dynamic presentation layers using Java to deliver intuitive user interfaces for banking operations.
- Applied data normalization and constraints in SQL. Automated data processing pipelines using Spring Batch, improving reliability for scheduled jobs. Designed complex relationships with Hibernate, supporting domain-driven design. Integrated JPA with Spring Data for repository-driven development.
- Secured RESTful APIs with OAuth2 and role-based access control. Consumed external SOAP Web Services for financial and payment system integrations. Integrated Docker with CI/CD to streamline deployments.
- Integrated MySQL with Hibernate/JPA for persistence in Java apps. Enhanced performance by optimizing controllers and views in MVC applications. Integrated static code analysis and testing into CI/CD pipelines. Secured environments by applying Linux/Unix user and file permissions.
